

Increase the life-cycle of your building assets with our protective coating solution.

“as with all of our commercial developments, we wanted a solution that protected our investment and provided added value to our clients.”

Available exclusively from Environmental Coatings Australasia, the easy-on™ system of protective coatings provides a scientifically proven solution for increasing the life-cycle of interior and exterior surfaces.

Its unique chemical construction provides an environmentally friendly barrier, ensuring that surfaces maintain their appearance for longer reducing the costs associated with refreshing and updating the appearance of building assets.

The easy-on protective coating provides up to twenty times more protection than that of ordinary paint and is already being utilised by local governments, educational institutes, commercial developers, retail developers and the transport industry.

Extremely flexible in application, the easy-on system creates a tough nonstick barrier that protects surfaces against UV fading and all known types of graffiti. The easy-on coating works in much the same way as a nonstick frying pan - although graffiti, dirt and other contaminants can gain purchase on the easy-on surface, they are quickly and easily removed using nothing more than a mild and safe cleaning agent.

easy-on has been exclusively tested for peace of mind and is the only graffiti coating in the world to be awarded “True Permanent” status by the National Materials Research Institute in the United Kingdom.

- » Can be applied to any surface.
- » Lasts up to 10 years.
- » Makes cleaning easy.
- » Resists all graffiti media.
- » Withstands 100's of cleaning cycles.
- » Highly abrasion resistant.
- » UV resistant.
- » Protects painted & unpainted surfaces.
- » Can be used internally or externally.
- » Complies to all building regulations.
- » Solvent free.
- » Low VOC.
- » Protects in just one coat.

solutions for the environment

Application is simple

The easy-on system provides flexible application and can be utilised on a range of surfaces including; concrete, painted or unpainted brick, tiles, metals, stone, plaster, walls, doors, ceilings and timber. The coating is supplied in 4.5 litre containers and can be applied using a brush, roller or spray - each container of coating will cover approximately 120 m².

Coating performance is determined by the initial surface preparation. Before the coating is applied the user must ensure that the surface is clean, dry, undamaged and free of all contaminants.

About Environmental Coatings Australasia

Established in 2008 Environmental Coatings Australasia (ECA) is a distributor and licensed applicator for a range of environmentally preferred coatings designed to assist businesses with protecting their assets and reducing their carbon footprint.

Our exclusive range of solutions include heat barrier protection, protective wall coatings, anti bacterial protection and anti graffiti protection - increasing the life-cycle of business assets and reducing the costs associated with on-going maintenance and restoration.

Our environmentally preferred solutions have been scientifically proven to;

- reduce energy consumption
- reduce carbon emissions
- reduce environmental impact

With over 40 years industry experience in facilities management the team at ECA is dedicated to providing a first class service. Every member of our team is fully trained in the application and technical benefits of all of our products ensuring that we can continue to provide optimum support to our clients.
